

Velosys has been successful in designing, developing, and implementing GIS enterprise solutions worldwide for our customers in oil & gas, telecommunications, Department of Defense, and local and federal government agencies through exceptional service, accountability, and superior technical solutions. Velosys is recognized by our clients for offering the expertise of a large firm while providing the responsive customer service and high quality deliverables of a small business.

GIS is an important and vital part of our daily activities and we understand the challenges GIS teams may face in development and maintenance of enterprise GIS systems and applications. Velosys GIS consultants are experts in geospatial processing, analytics, applications, and mobile solutions in addition to set-up, upgrades, and migration of GIS servers and systems. We work directly with organization stakeholders to develop innovative and efficient GIS solutions.

Velosys Geospatial Support Services are now available in yearly support credits. As a VGSS client, your organization will receive an allotted number of hours of support per month at a competitive hourly rate. The GIS Support credits allow the flexibility of utilizing the hours of support per month up to the fully subscribed amount of the year's sum as needed. Upon surpassing the service hours, services will be negotiated and billed at a similar rate.

Services Include:

GIS Health Check

Our GIS experts will work directly with your stakeholders on-site to conduct a thorough GIS Systems Health Check to gain an understanding of your existing GIS Systems Architecture. Using industry-proven Esri technology to perform each Health Check, we examine and evaluate your systems and report our detailed findings on each level, complete with recommendations for any discovered issues.

GIS Development

Whether it is developing a simple widget for weather updates or creating an enterprise application that will work on the mobile side of your GIS systems, the Velosys GIS Development group will assist in your development needs by providing quality solutions that are completed in a timely manner, ensuring a smooth integration into your current GIS environment.

GIS Support & Implementation Services

Velosys GIS experts are available to support and provide assistance for your organization as you address GIS implementation solutions. Whether you need our support on installation of the newest versions of Server or ArcGIS or simply to assist in addressing issues that arise in day-to-day activities, the Velosys GIS group is ready and willing to help you through your toughest support and implementation issues.
